Premiere Effects

Ken Burn Effect: Pan & Scan

Technique of embedding still photographs in motion pictures, featuring slow zooming, panning effects, and fading transitions between frames.

The zooming and panning across photographs gives the feeling of motion, and keeps the viewer visually engaged.

The effect can also be seen in smartphones such as the N73 smartphone by Nokia, applied to the slideshows the phone creates from the pictures stored in it.

Many seventh-generation video game consoles also feature versions of this effect, including Nintendo's Wii Photo Channel, Sony's PlayStation 3 and within the Last.fm app for Xbox 360.

Interlaced video displays alternating sets of lines, called the Even field and the Odd Field for 1/60th of a second each consecutively. Old video formats like NTSC and Pal use this method of scanning.

Progressive video displays, stores and transmits moving with all the lines of each frame are drawn in sequence. Progressive video displays the entire image in 1/60th of a second, 1 entire image per frame. HDTV and newer formats are progressive.
